Clinton Jay Ramonida

Senior Full-Stack Software Engineer · TypeScript · React · Next.js · Node.js

clintonramonida25@gmail.com · Vancouver, BC · linkedin.com/in/clintonramonida · clintonramonida.ca

Summary

Senior full-stack engineer with **9 years building production web systems** — five of them at AutoTrader.ca on AutoSync, the automotive SaaS platform serving Canadian dealerships nationwide, working across Vue, Node.js, PHP and MySQL with Redis caching and AWS infrastructure.

Since 2026 I have designed and shipped **two live Next.js sites end to end**. On DriftPilot, GitHub Actions asserts Lighthouse performance ≥ 95, LCP under 1.5s and a 260 kB script ceiling on every pull request.

Work Experience

Founder & Senior Software Engineer, DriftPilot

Jan 2026 – Present · driftpilot.ca

Product engineering studio building web platforms for small businesses and automotive service companies. Sole engineer.

- **Designed and shipped driftpilot.ca solo** — 37 prerendered routes on Next.js 16, React 19 and TypeScript, live on Vercel.
- **Moved the quality bar into the pipeline.** Lighthouse CI asserts performance ≥ 95, accessibility ≥ 98 and a 260 kB script budget on every pull request; every one merged since has passed, and it caught three real defects.
- **Built the content layer and the lead pipeline** — typed async accessors against fixed domain contracts, Zod-validated Server Actions, and a retrying webhook client that reports a failed lead to the visitor and to Slack, with tests in CI.

Selected independent build — Riflessi Auto Care

Jul 2026 – Sep 2026 · riflessiautocare.ca

- **Built the first full version in five weeks by re-theming rather than rebuilding** — new tokens and content, components adapted to the brand.
- **Cut the hero 3D asset from 19.07 MB to 2.05 MB (89%)** with a purpose-built glTF pipeline, and gated the scene at the dynamic import so devices that fail its capability check never download it.

Senior Software Engineer, AutoTrader.ca — AutoSync

Apr 2021 – Jun 2025

Software Engineer (Full Stack-Product), Jan 2020 – Mar 2021

A leading Canadian automotive marketplace; AutoSync served its dealerships nationwide.

- **Built and shipped production features on AutoSync** across Vue.js, Node.js, PHP, MySQL and REST APIs, on a large shared codebase.
- **Worked in a custom object-oriented PHP architecture built in-house** alongside Vue.js and Node.js services.
- **Implemented and tuned Redis Object Cache Pro against AWS-hosted Redis** — ending three years of cache churn: no reverts or removals through May 2025.
- Ran production releases as release master on versions between v3 and v12.7, through Bitbucket Pipelines and CodeDeploy.
- **Delivered technical SEO where inventory discoverability is the product** — structured data, sitemaps and canonicalisation across dealer sites.
- **Mentored engineers through code review and pair programming** in Agile delivery.

Skills

Languages: TypeScript, JavaScript (ES2023), PHP, SQL, Python

Frontend: React 19, Next.js (App Router, Server Components), Vue.js, Tailwind CSS, HTML5, SCSS, design systems and tokens, WCAG accessibility

Backend: Node.js, REST APIs, Next.js Server Actions, MySQL, Redis, Zod schema validation

Cloud & DevOps: AWS, Vercel, GitHub Actions, CI/CD, Core Web Vitals and performance budgets, Cloudflare, Docker

AI & Automation: AI-assisted development with Claude, multi-agent review workflows where only one role writes code, agent role and prompt design

Practice: Architecture guardrails, decision records, code review, technical SEO, Agile / Scrum, mentoring

Full Stack Development Specialist (Intermediate), Convertus (acquired by AutoTrader.ca)

Nov 2018 – Jan 2020

- Developed features for a **WordPress multisite platform serving enterprise automotive clients**, extended with custom object-oriented PHP.
- **Authored the platform's SEO subsystem** — Vehicle and AutoDealer structured data extending Yoast's schema graph, custom inventory sitemaps in English and French, and canonical and meta handling for near-identical vehicle pages.
- **Co-built myGarage**, a cross-site saved-vehicle system on a dedicated AWS RDS store, and the **Node.js service that emailed buyers when a saved vehicle dropped in price**.
- Supported production systems and participated in code review across Agile teams.
- Mentored teammates, and worked with product and account managers to turn automotive clients' requirements into features.

Programming Teaching Assistant, Full-Stack Development, VFS School of Creative Technologies

Jan 2018 – Nov 2018

- Coached students through debugging, code review and software engineering practice; supported instructors across frontend and backend curriculum.
- Rebuilt the internal grading platform in Vue.js and MySQL, replacing the instructor grading workflow.

Junior Full-Stack Developer, VFS School of Creative Technologies

Oct 2016 – Aug 2018

- Built responsive web applications and internal database-driven platforms in AngularJS, React, Python, PHP and MySQL.
- Improved application performance through profiling and frontend optimization.

Selected Projects

Project OS — personal engineering standard

`self-authored, applied across my own projects`

Defined stack defaults, performance budgets, testing priorities, source-of-truth rules and AI-agent operating constraints for my own projects.

Multi-role AI development pipeline

`self-authored build-time tooling — not a shipped end-user feature`

Build-time tooling where one role writes and four are report-only, with structured P0 / P1 / P2 findings and human adjudication before changes land.

Education

VFS School of Creative Technologies, Programming for Games, Web and Mobile · Vancouver, BC · Oct 2016 – Oct 2017

Douglas College, Computer Science · New Westminster, BC · Jan 2016 – Oct 2016
